

# A Revolution in Controlled Drug Management

Innovative  
eHealth

HS8®

# Simplify your workflows

## ▾ What is HS8?

HS8 is a comprehensive controlled drug management platform, designed for use throughout all areas within hospitals where controlled drugs are stored, including pharmacy, wards and theatres. The platform supports deep integrations with existing systems and provides hospitals with a completely paperless solution for their controlled drug processes.

## ▾ The HS8 Value Proposition

### **Governance**

Through improved visibility, alerting, monitoring and reporting, facilitating the reduction of controlled drug diversion and misappropriation.

### **Compliance**

Through the enforcement of precise & consistent procedures to ensure regulatory obligations are met.

### **Efficiency**

Through streamlining and automation of administrative tasks.

### **Accuracy**

Through seamless integration with existing systems.

# Minimise the risk of drug diversion

## ▾ Governance, Regulatory Compliance & Safety

HS8 is compliant with controlled drug regulations and provides a number of intelligent functions to assist with medication governance, improving controlled drug safety and reducing medication discrepancies, misappropriation or fraud.

### System capabilities include:

-  Role and location based security helps reduce the occurrence of fraudulent activity
-  Granular reporting and real-time alerting supports improved investigative processes
-  Customisable workflows facilitate compliance with regulatory requirements

# Reduce operational costs

## ▾ Register Accuracy & Operational Efficiencies

HS8 provides an extensive range of functions and integrations that significantly streamline and automate medication related administrative tasks. HS8 links register locations in real-time, eliminating the need for double entry and significantly reducing the potential for errors.

### System capabilities include:

-  Integration with existing pharmacy dispense and inventory systems
-  Integrated stock distribution between pharmacy, wards and theatres helps reduce errors and maintain accuracy hospital-wide
-  Stock refill management functionality enables the pharmacy to proactively resupply wards and theatres to help maintain optimal stock levels

Fast to learn,  
easy to use

### Advanced Functionality. Intuitive Design

HS8's comprehensive functionality covers all controlled drug related activity within a paperless solution whilst being quick to learn and easy to use. Design collaboration with medical professionals has produced a thoroughly considered interface that provides hospital staff with an exceptional user experience.

HS8®

# Adaptable to all hospital environments

## Enterprise Ready & Fully Integrated

HS8 is configurable to work within all hospital environments. This includes various technical architecture configurations and integration with many existing systems.

### Technical Overview:

- ▶ Integrates with dispense, inventory and other systems
- ▶ On-premise, hybrid-cloud or full cloud hosting options
- ▶ Offline capability in case of system outages
- ▶ Optimised for PC and Windows tablets
- ▶ Supports Citrix environments

## Comprehensive Training & Full Customer Support

Modeus is committed to providing outstanding training and customer support. Our team has the knowledge and expertise to train and support all users of the system.

### Training

Modeus offers both on-site and remote training. Training material and documentation is provided.

### Support

Modeus provides exceptional support governed by SLA response and resolution targets.
